|           |  |   |          | references in parentheses are to   |       |  |
|           |  | that docum  | ment;    | see figure 1):                     |       |  |
|           |  | 7 '   |          |                                    |       |  |
|           |  | _   |          | gement for a gas turbine used to   |       |  |
|           |  |   |          | een the radially inner ends of     |       |  |
|           |  | _   |          | ) of a vane ring and a rotor, the  |       |  |
|           |  | -   |          | g at least two sealing projections |       |  |
|           |  | which exte  | end in   | the circumferential direction of   |       |  |
|           |  | the rotor   | and a    | re spaced apart in the axial       |       |  |
|           |  | direction   | (the     | first and third projections        |       |  |
|           |  | designated  | d by (   | 54)), the sealing projections      |       |  |
|           |  | sealing th  | ne gap   | in combination with inlet backing  |       |  |
|           |  | layers (60  | )) whi   | ch form a honeycomb structure and  |       |  |
|           |  |   |          |                                    |       |  |

Box No. V

are associated with the radially inner ends of the guide vanes. The sealing projections are inclined or slanted in the axial direction towards a higher-pressure side (see (54) and the gas flow direction in the turbine), and at least one central sealing projection oriented towards the higher-pressure side is arranged in the space delimited by the at least two sealing projections (the first and third projections designated by

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;

2.1 The subject matter of claim 1 thus differs from the known sealing arrangement for a gas turbine in that a <u>recirculation</u> structure is arranged instead of a <u>sealing</u> projection in the space delimited by the at least two sealing projections and the corresponding inlet backing layers.

(54)) and the corresponding inlet backing layers.

- 2.2 The subject matter of claim 1 is thus novel (PCT Article 33(2)).
- 3. The present invention can therefore be considered to address the problem of optimising a sealing arrangement which comprises sealing projections and corresponding inlet backing layers designed as a honeycomb structure.
- 3.1 The solution to this problem, as proposed in claim 1 of the present application, involves an inventive step (PCT Article 33(3)) for the following reasons:

Box No. V

citations and explanations supporting such statement

The integration of a thus designed recirculation structure in the sealing arrangement comprising sealing projections and corresponding inlet backing layers further optimises the sealing effect.

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;

- 3.2 Even if document D2 shows a sealing arrangement with a recirculation structure, a person skilled in the art would not combine the technical features of D2 with the technical features of D1. D2 actually deals with a contactless labyrinth with corresponding gaps (a sealing principle which differs from the sealing principle of the sealing arrangement in D1, in which the sealing projections are designed to brush against the backing). A person skilled in the art would consider the recirculation structure described in D2 an additional flow measure which would not be necessary or helpful in sealing arrangements having straight or slanted sealing projections and inlet backing layers designed as a honeycomb structure.
- 3.3 Claims 2-8 are dependent on claim 1 and thus also meet the PCT novelty and inventive step requirements.
- 4. The sealing arrangement according to the present application is industrially applicable in the field of turbomachines.
- 5. Contrary to PCT Rule 5.1(a)(ii), the description
